

PROJECT | RENFREW TOWN HALL REFURBISHMENT / EXTENSION

OUR ROLE | MECHANICAL AND PUBLIC HEALTH SERVICES DESIGN

PROJECT BUDGET | £4 MILLION

The 1873 Renfrew Town Hall is being extensively refurbished and extended with the help of an £800,000 Lottery grant.

A new museum will chart Renfrew's place in aviation history:

- ✦ The first aeroplane to cross the Atlantic was built nearby
- ✦ The site, in 1912, of Scotland's first municipal airport
- ✦ In 1948 Renfrew was the UK's third busiest airport

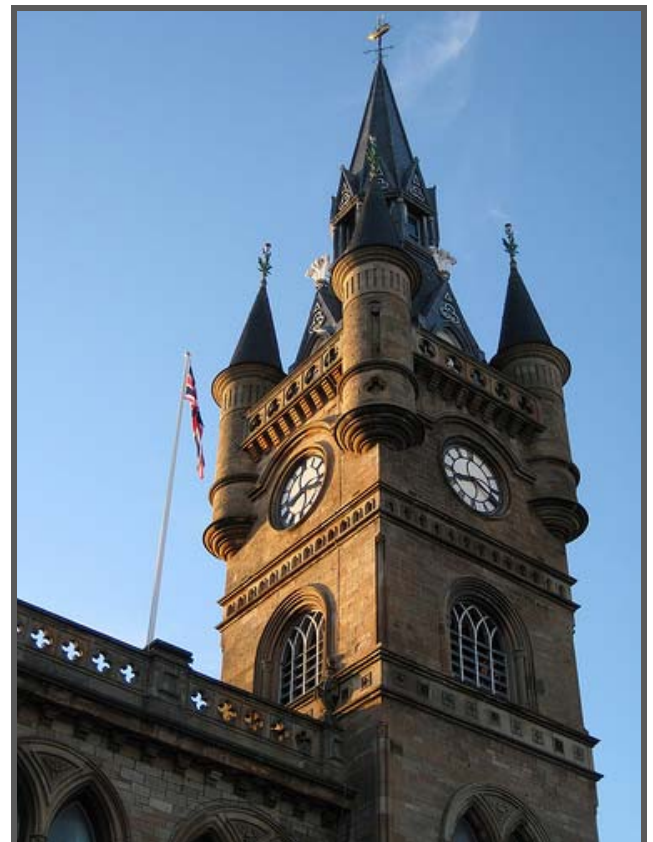

The challenge for NIFES' designers was to make the building as comfortable and energy efficient as it could be, given the limitations of the A-listed building.

Our designers had to have a detailed knowledge of the building and apply creative solutions to ensure the ornate plasterwork and mosaic stone floors were not disturbed.

The new museum, in an extension to the original structure, has close-controlled air conditioning to ensure the correct

environment is always maintained in order to protect the precious exhibits.

M&E budget : £540k
